Diagramme de déploiement : infrastructure de production SOYAFF

Postes clients (Dakar / Bamako)

HTTPS

Cloudflare DNS + proxy, SSL Full (strict)

HTTPS (Full strict)

Serveur dédié OneProvider Paris, Ubuntu 24.04 LTS
Intel Xeon E3-1240 v6, 32 Go RAM, 3 x 256 Go SSD SATA

Nginx, reverse proxy ports 80/443 (UFW : 22, 80, 443)

soyaff-logstique.com api.*

n8n.*

airflow.*

monitor.*

gitlab-runner (service système, executor shell)

HTTPS (jobs)

Docker Engine, réseau soyaff_network (ports publiés sur 127.0.0.1)

Applicatif

- soyaff_frontend :3000, React 18 SPA
- soyaff_backend :4000, Express.js

IA / RAG

- ollama :11434, Mistral 7B
- soyaff_rag_api :8000
- soyaff_n8n :5678

ETL

- airflow_scheduler
- soyaff_airflow_web :8080

Supervision

- soyaff_prometheus :9090
- soyaff_loki :3100
- soyaff_grafana :3001
- soyaff_node_exporter :9100
- soyaff_promtail
- soyaff_blackbox (sondes HTTP)

soyaff_postgres PostgreSQL 16 + pgvector

/var/lib/docker (sdb)

/data (sdc) uploads Excel

GitLab.com (dépôts, pipelines)

HTTPS/REST

API Claude (Anthropic)

pg_dump quotidien (rclone, FTPS)

HTTPS (alertes)

API Telegram (alertes)

Stockage de sauvegarde OneProvider (FTP, 100 Go)
